

## SEG Foundation Student-Dedicated Field Course

---

### **PRECIOUS METALS DEPOSITS OF THE SOUTHWESTERN US**

May 12 to 18, 2013

Field Course Leaders:

Dr. William X. Chávez, Jr., New Mexico Institute of Mining and Technology

Dr. Erich U. Petersen, University of Utah

This is No. 11 in the SEG Foundation-sponsored series of student field courses and will examine a variety of epithermal gold occurrence types in different geologic settings, from southwestern Arizona to northern Nevada. Deposit types will include detachment- and volcanic hosted, and both low- and high-sulfidation systems in open-pit and underground exposures.

Travel will be via charter motor coach (the SEG “mobile classroom”), to facilitate interaction between student and professional participants, and the field course leaders.

This course is open to economic geology students worldwide – student participation is limited to 16 students. Selection is very competitive with strong preference given to SEG Student Members.

There is space for up-to four professional mentors to participate in, and contribute to, the course; those interested should contact Borden Putnam, Chair of the SEGF Field Trip Program, for further information: [bputnam@mionecapital.com](mailto:bputnam@mionecapital.com).

General inquiries can be directed to: [studentprograms@segweb.org](mailto:studentprograms@segweb.org).

The application and detailed itinerary will be posted on the SEG website in due course.

**Application Deadline: March 10, 2013**
