Giant Carbonate-Replacement (Manto) Gold Deposits of North-Central Nevada: The Carlin and Cortez Trends, USA

September 21 – 22, 2021

Field Trip Leaders:
Jean Cline and John Muntean

Guidebook Editors:
Borden Putnam, Ryan Taylor, Joanna Lipske, and K. Brock Riedell

SOCIETY OF ECONOMIC GEOLOGISTS FOUNDATION, INC.

SEGF STUDENT FIELD TRIP 2021
Giant Carbonate-Replacement (Manto) Gold Deposits of North-Central Nevada: The Carlin and Cortez Trends, USA

September 21 – 22, 2021

Field Trip Leaders:
Jean Cline and John Muntean

Guidebook Editors:
Borden Putnam, Ryan Taylor, Joanna Lipske, and K. Brock Riedell

SOCIETY OF ECONOMIC GEOLOGISTS FOUNDATION, INC.
SEGF STUDENT FIELD TRIP 2021
On the cover: Predictive exploration and production models – sequence tract facies. Four types of depositional environments, late Ordovician to early Mississippian, favorable for localizing carbonate replacement (manto) gold deposits in north-central Nevada (modified from Cook, 2015).
## Syllabus – Field Guide

### 1.0 Introduction

1. Carlin-style Gold Deposits: History, Overview and Discovery ........................................... 2  
2. Western United States Stratigraphic and Tectonic History .................................................. 4  
3. Carlin-type Gold Deposits of the Carlin and Cortez Trends ................................................ 7  
4. 1a. Carlin-Type Gold Deposits in Nevada (Muntean, 2020) .................................................... 35  

### 2.0 Carlin Trend

1. Tri-Star Complex (Genesis): Silverstar open pit mine ..................................................... 83  
2. Leeville underground mine .............................................................................................. 95  

### 3.0 Cortez Trend

1. Goldrush underground mine (Creel and Bradley, 2013) ................................................... 121  
2. Pipeline Complex ........................................................................................................ 135  

### 4.0 Other Gold Deposit types

1. Robertson – Eocene intrusive related? ............................................................................. 153  
2. Fire Creek – Miocene, basalt hosted ............................................................................. 169  
3. Hollister – Miocene, volcanic-rock hosted ..................................................................... 189  

### References

References .......................................................................................................................... 197

### Appendices

Appendix I: General Additional Carlin-type Deposit Information ........................................ 211  
Appendix II: Carbonate Sequence Stratigraphy ................................................................... 235  
Appendix III: Discovery Backgrounds, the Price of Gold, and Industry Consolidation .... 247  
Appendix IV: Units of Measure and Conversions .............................................................. 249
